Note: Claims appearing in more than one group will only be examined to the extent that they read upon the elected invention.

2. The inventions are distinct, each from the other because of the following reasons: Inventions (1) –(132) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are distinct from one another because each Group requires structurally different compounds (Note that various formulae are utilized wherein the rings may contain various non-carbon atoms) in order to reach a desired goal (the particular method for which the compounds are being used). Thus, the methods are distinct from one another and would require a separate search of the art even though some of the groups have the same subclass.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

ELECTION OF SPECIES

4. Claims 1-44 are generic to the following disclosed patentably distinct species. In particular, the methods are directed to various formulae where the compounds utilized are structurally different. For example, one may have a method comprising Formula 4 wherein the variables W6 and X6 vary from CR1R2, O, NR3, and S. Applicant is

Art Unit: 1618

required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Applicant is respectfully requested to elect a single disclosed species from within the elected group above. The species should identify each of the variables associated with the compound. In addition, Applicant should identify the diagnostic or therapeutic procedure, the biocompatible organic solvent, and the imaging procedure.

5. Due to the complexity of the restriction, a request of an oral election to the above restriction requirement was not made.

6. *Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the*

requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

7. The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

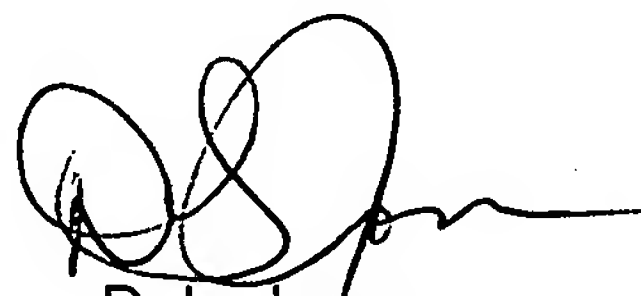

8. Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. L. Jones whose telephone number is (571) 272-0617. The examiner can normally be reached on Mon.-Fri., 6:45 a.m. - 3:15 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Hartley can be reached on (571) 272-0616. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
